SUMMARY

I finished my BSc in Computer Science in 2025 and joined OpsMonsters as an intern, where I also lead the intern team. Most of my day goes into a DevSecOps training plan covering Linux administration, shell scripting, networking and security audits. Two of my personal projects are running in production, and I am currently learning AWS and penetration testing.

EXPERIENCE

OpsMonsters 2026 to Present

DevSecOps Intern and Team Lead

- Lead the intern team and coordinate our daily DevSecOps training, about 8 hours a day.
- Work hands-on with Linux: users and permissions, services, networking and shell scripting.
- Write a daily study report and security audit log (log review, failed logins, unknown IPs, file integrity).
- Wrote server_audit.sh, a Bash script that prints hostname, user, uptime and system details for server checks.
- Practise AWS (EC2, S3, IAM, VPC) and basic penetration testing (recon, scanning, OWASP Top 10) in a lab setup.

PROJECTS

Personal Projects

Backend, automation and web

- **Reelsmith v2 (live)**, built with Python, GitHub Actions, Supabase and Vercel. Picks a trending topic, writes a script, records a voice-over, edits the video and schedules it for YouTube Shorts and Instagram Reels. Videos are rendered on GitHub Actions, so the whole system runs on free tiers.
- **Muse Studio (live)**, built with FastAPI, JWT, Docker and Vercel. A dashboard that runs five fictional AI creator accounts on Instagram. Every post has to pass a content filter, AI disclosure, posting limits and a duplicate check, and there is a kill switch. The backend has 64 automated tests.
- **Project Management API**, built with Node.js, Express and MongoDB. REST API with 36 endpoints for users, projects, tasks and comments, JWT login, role-based access, search, pagination, soft delete and activity history.

Other Projects

- **Tempest**, built with Python. Command-line security toolkit with 28 tools, including a port scanner, packet sniffer, SSH brute-force detector, web vulnerability scanners, file integrity checker and a phishing detector.
- **May~be**, built with Flutter, OAuth 2.0 and Node.js. Music app that brings Spotify, YouTube Music and Apple Music into one library. Logins use OAuth with PKCE, and tokens are stored in the device keychain.

EDUCATION

St. Joseph's College (Arts and Science), Koovur, Chennai 2022 to 2025

BSc in Computer Science

SKILLS

- **DevOps:** Linux, Bash, Git, GitHub, Docker, Docker Compose, GitHub Actions, Vercel, Render. Learning Kubernetes.
- **Security:** Server auditing, log review, SonarQube, OWASP Top 10, Nmap, Burp Suite, Kali Linux
- **Cloud:** Supabase. Learning AWS (EC2, S3, IAM, VPC, security groups).
- **Backend:** Node.js, Express, FastAPI, REST APIs, JWT, OAuth, MongoDB, PostgreSQL, Prisma, pytest
- **Other:** Python, JavaScript, TypeScript, React, HTML, CSS, Flutter, PyTorch
