Education

BSc in Computer Science
St. Joseph's College (Arts and Science), Koovur, Chennai — **2022 to 2025**

Skills

DevOps (learning): Linux, Bash, Git, GitHub, Docker, Docker Compose, GitHub Actions, Vercel, Render, Kubernetes

DevSecOps (learning): Server auditing, log review, SonarQube, OWASP Top 10

Penetration Testing (learning): Recon, scanning, Nmap, Burp Suite, Kali Linux

AWS (learning): EC2, S3, IAM, VPC, security groups. Also Supabase

Node.js and Backend (learning): Node.js, Express, FastAPI, REST APIs, JWT, OAuth, MongoDB, PostgreSQL, Prisma, pytest

Used in my projects: Python, JavaScript, TypeScript, React, HTML, CSS, Flutter, PyTorch

Experience

OpsMonsters | DevSecOps Intern and Team Lead — **2026 to Present**

- Lead the intern team and coordinate our daily DevSecOps training, about 8 hours a day.
  Work hands-on with Linux: users and permissions, services, networking and shell scripting.
- Write a daily study report and a security audit log covering log review, failed logins, unknown IP
- addresses and file integrity.
  Wrote server_audit.sh, a Bash script that prints the hostname, current user, uptime and system details for routine server checks.
- Practise AWS (EC2, S3, IAM, VPC) and basic penetration testing (recon, scanning, OWASP Top 10)
- in a lab setup.

Projects

- Reelsmith v2 (live) | Python, GitHub Actions, Supabase, Vercel: Built a tool that picks a trending topic, writes a script, records
- a voice-over, edits the video and schedules it for YouTube Shorts and Instagram Reels. Videos are rendered on GitHub Actions, so the whole system runs on free tiers.
  Muse Studio (live) | FastAPI, JWT, Docker, Vercel: Built a dashboard that runs five fictional AI creator accounts on Instagram. Every post has to pass a content filter, AI disclosure, posting limits and a duplicate check, and there is a kill switch. The
- backend has 64 automated tests.
- Project Management API | Node.js, Express, MongoDB: REST API with 36 endpoints for users, projects, tasks and comments, with JWT login, role-based access, search, pagination, soft delete and an activity history.
  Tempest | Python: Command-line security toolkit with 28 tools, including a port scanner, packet sniffer, SSH brute-force detector, web vulnerability scanners, file integrity checker and a phishing detector.
  May~be | Flutter, OAuth 2.0, Node.js: Music app that brings Spotify, YouTube Music and Apple Music into one library. Logins use OAuth with PKCE, and tokens are stored in the device keychain.

Summary

I finished my BSc in Computer Science in 2025 and joined OpsMonsters as an intern, where I also lead the intern team. Most of my day goes into a DevSecOps training plan covering Linux administration, shell scripting, networking and security audits. Two of my personal projects are running in production, and I am currently learning AWS and penetration testing.
